Short Description and Scope of the Project

Proposed project description

Salon Management System is focused on improving the salon's system services. It is a stand-alone system that can be accessed by the admin which is the owner and the employees of the salon

- This is an online system which helps customers to submit their appointments (date and time),
- It helps to overcome problems of time wastage for customers waiting to be worked on.
- Other valuable features like customer and service management, invoices and report generation are also included in the system.

Plan of work and product description:

Planning basic design and architecture. Fine-tuning the requirements according to the design.

Implementation stack:

Frontend: HTML, CSS and JavaScript.

Backend: PHP.

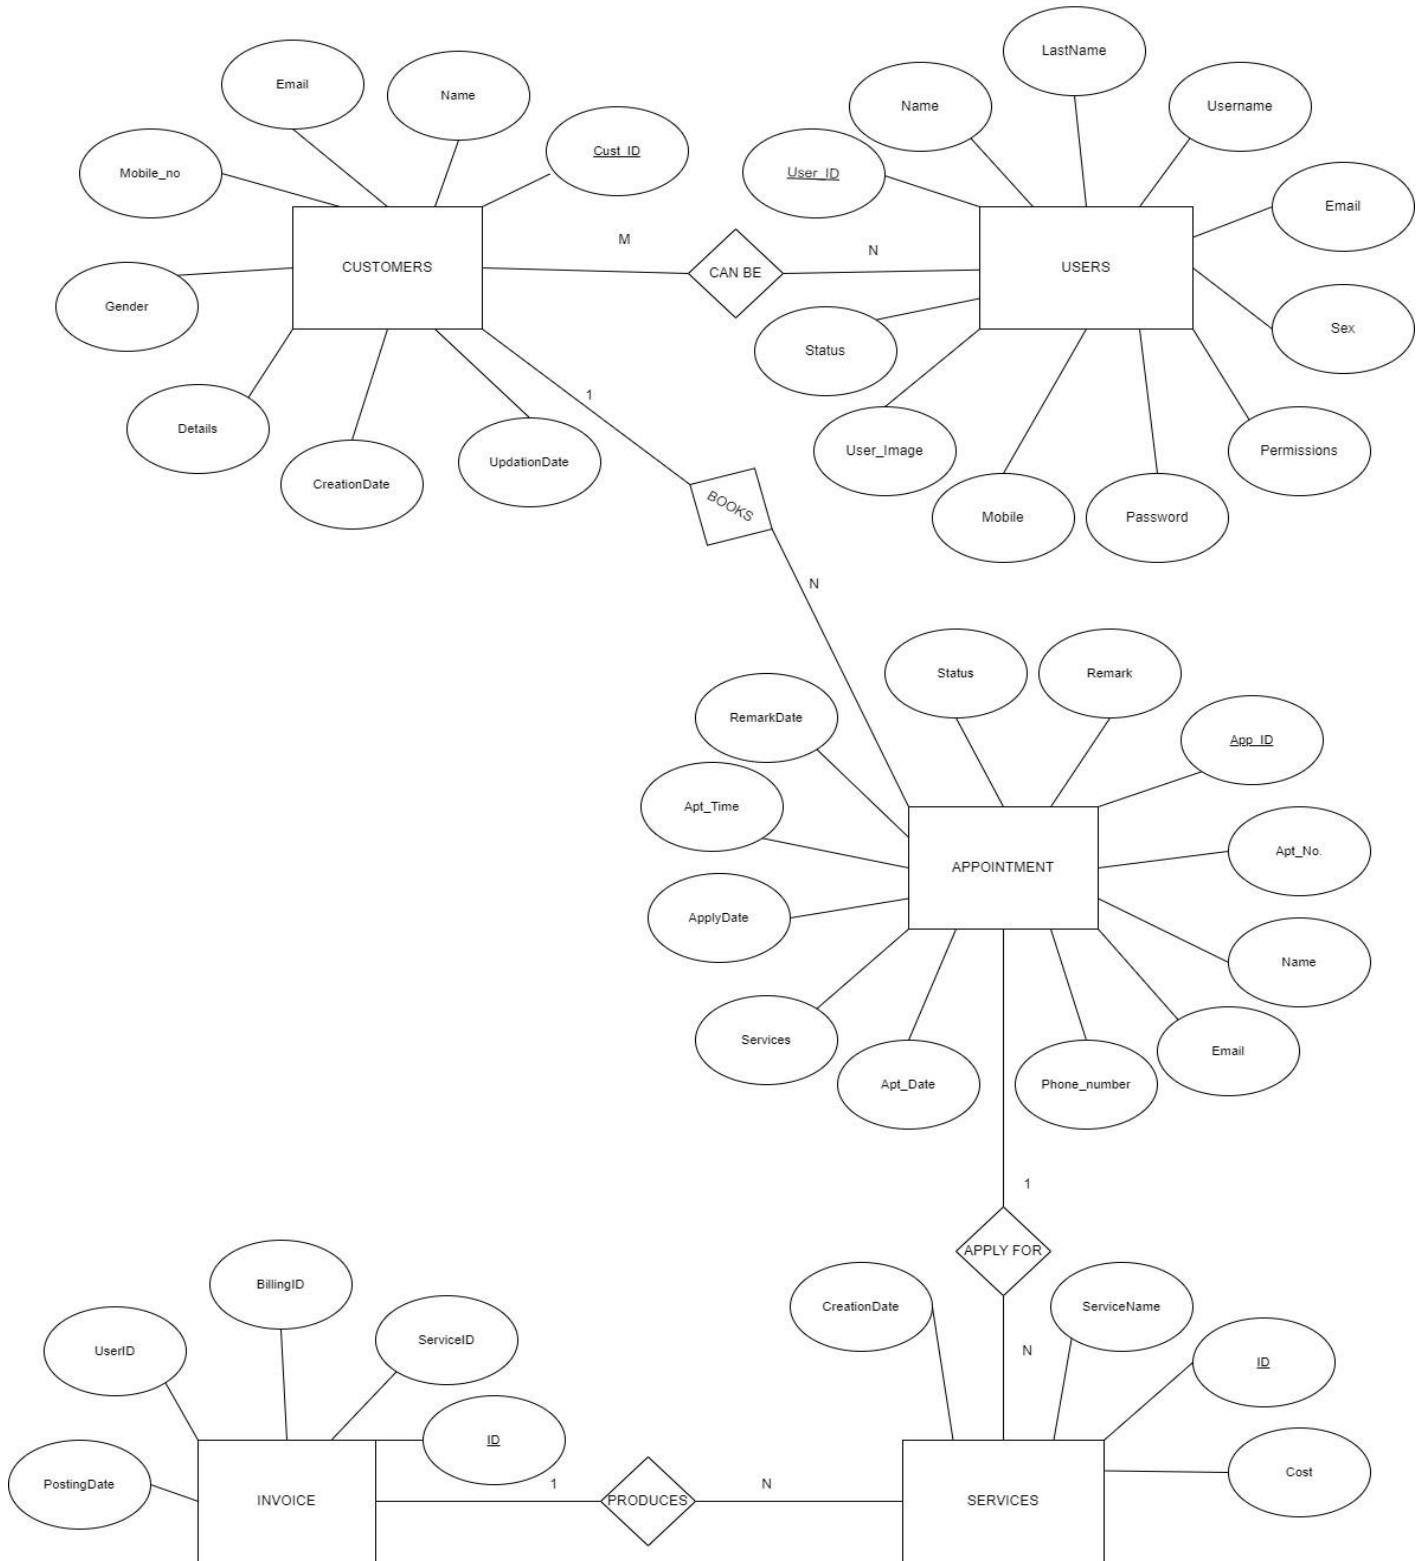

Database: MySQL database

Features

- User Registration
 - User login system
 - Change password
 - Forgot password
 - Profile management system.
 - Service and customer management
 - Registering and managing system users(Admins)
 - Appointments management, Invoices and many more
- Non - functional Requirements:**
- Maintainability
 - Serviceability
 - Security
 - Usability

The screenshot shows the phpMyAdmin interface for the tblinvoice table in the bpmstest database. The query executed is a SELECT statement that groups by month and year, and finds the minimum cost for each group. The results show two rows: one for May 2022 with a total price of 300, and one for June 2022 with a total price of 1000. The interface includes a sidebar with database and schema navigation, and various operation buttons like Browse, Structure, SQL, and Export.

On the left, the database structure is displayed under the 'bpmsdb' database, including tables like tbladmin, tblbook, tblcontact, tblinvoice, tblpage, and tblservices. The main panel shows a query result for a function named 'cost'. The message says 'MySQL returned an empty result set (i.e. zero rows) (Query took 0.0192 seconds.)'. The query itself is:

```
CREATE or replace FUNCTION cost (Service varchar(255)) RETURNS varchar(255) DETERMINISTIC BEGIN DECLARE cost INT; DECLARE ans VARCHAR(255); SET cost = (SELECT cost  
tblinvoice where (Service=tblinvoice.ServiceName)); IF cost > 400 THEN SET ans = "high cost"; ELSE SET ans = "low cost"; END IF; RETURN ans; END;
```

q2. retrieve number of days since service creation

```

Developing a Frontend

The frontend should support

1. Addition, Modification and Deletion of records from any chosen table
2. There should be a window to accept and run any SQL statement and display the result

Conclusion

This system will help saloons to pitch their business underneath their space to expand their everyday business.

This project also helps local vendors to show their presence globally on the internet and serve their customers with their art.

In the salon and beauty industry, the Online Reservation System is suitable for use to reduce customer waiting time and experience a hassle-free environment
